

No-Code Rapid Application Development (RAD) Module

SPEED

Build applications, learn, and iterate in days. Quickly connect everything from anywhere and deploy powerful business logic without a single line of code. A typical app development cycle is just 2 to 6 weeks.

POWER

A powerful tool that delivers simple solutions to the most complex business problems. Extend the capability of existing backbone systems without expensive customizations. Applications range from simple forms and reports to complex ERP systems and everything in between.

INTEGRATION

Securely unite & orchestrate all your enterprise data, systems, and web/cloud services without code. Deploy anywhere.

ENTERPRISE READY

Aligns with your security model and plays well with enterprise systems. Flexible UX/UI design and Dev/Test/Production environments give you complete control.

Digitizing business processes requires marrying data from multiple sources with the subject matter expertise to build the right business logic and workflows that can be deployed in user friendly employee, customer or partner facing applications. Traditionally building such applications was costly and time consuming, requiring highly technical development skills that are not resident in most mid-market businesses.

Our no-code application development platform changes all that. It allows businesses to integrate with ANY data systems, extend existing functionality and deploy complex applications in DAYS not months. Applications work on all devices and automatically adjust and scale at the point of use. The platform was designed to play well with existing enterprise systems and give you a rapid, low cost way of delivering new functionality without the cost, complexity and risk of changing existing backbone systems. Have your own team deploy custom, enterprise-ready business applications for any industry at the accelerated speed your enterprise needs to succeed and don't let your legacy systems hold you back.

The RAD platform provides a radically new way to quickly drive digital transformation in your business. No need for that massive end-to-end systems and process reengineering project. Instead go from an idea to a working application in days, quickly iterate with real user feedback and have your pressure-tested application in full production within a few weeks. Our simple SaaS pricing model means you subscribe for a modest annual fee and can build an unlimited number of business applications.

Modernize your business over time in quick bite size pieces that collectively add up to a massive digital transformation. A typical development project takes just 2 to 6 weeks from concept to production. Innovate, iterate and evolve as your business needs change and ditch the constraints of updating, building, buying and customizing complex enterprise systems. Leverage our platform to empower analysts and non technical business users to imagine, then build, real world applications that solve their real world problems without extending that ever-growing IT backlog. Explore our common use cases below for more information.

The Digital Transformation Platform for Mid Market PE-backed Companies

TRAINING

Leverage your own team to build powerful applications using our in depth developer training program. Choose from on-site, in office, or online training.

SERVICES

Our solution architects have decades of business process, data integration and application development experience.

Customers are paired with a Solution Architect to enable seamless adoption of the RAD platform and to support your in-house developers.

METHODOLOGY

Our rapid agile delivery methodology is made possible by the iterative capabilities of the RAD platform. End users are able to log into applications within days so feedback can be quickly integrated into the next release. A typical project lasts just 2 to 6 weeks.

ABOUT US

Halitics was created by private equity operating professionals based on more than a decade of working with portfolio companies to uncover value creation opportunities and drive performance and accountability. We select and partner with leading technology vendors to provide a set of world class capabilities and tools designed to quickly and cost effectively unleash digital transformation in middle market PE-backed companies.

Use Cases

NEW REVENUE MODELS

Businesses frequently evaluate multiple off-the-shelf solutions before realizing the need to customize an existing system or build in house. We enable any business to design new customer interfaces and revenue models from scratch with optimal workflow and flexibility. Leverage data in real time from existing systems of record without having to move or re-host the data. This enables powerful customer facing applications with full two-way integration to existing systems that look and feel modern and leverage the best of breed in modern microservices.

BUSINESS PROCESS AUTOMATION

Our applications have improved the efficiency of existing processes by as much as 20x. Our clients are able to easily automate processes at scale and dramatically improve user experience while increasing productivity and reducing human error. Quickly simplify and automate complex, semi-manual processes to reduce throughput times and improve customer, partner and employee experience all at lower cost with fewer errors and less risk.

DATA MANAGEMENT

Most businesses have numerous enterprise applications and systems of records. We seamlessly integrate on-premise, cloud, file systems and web services into a single view that can drive your business applications. Integration with other systems is executed in real time with full CRUD (Creating, Reading, Updating, Deleting) capability so you can control and secure your data at all times.

OPERATIONAL REPORTING

Most reporting solutions are limited to one function: reporting. With our RAD platform you can combine data capture, application logic and reporting in a single platform that plays well with all your enterprise systems.

SERVICES AVAILABLE

Software Platform
Installation, Setup & Support
Application Development
Developer Training

Example Applications

Over 950 client applications in production and growing.

RETAIL

Order Automation / Digital Personalized Ordering/
Workforce Management / Store Operations/
Vendor Management

PHARMA

Professional Collaboration / Compliance Monitoring/
Pharma Take Back / Field Force Management/
Drug Trials / Drug Interactions

INSURANCE

Claims Management / Agent Portal / Actuarial Dashboards

MEDIA

Endorsements / Events Managements / Profit and Loss/
Talent Profiles

FINANCE

Partner Performance / Backend Financial Integration/
Financial Performance Management/
Workflow Management
